

GUIDED TOURS FOR PRE-SCHOOL CHILDREN

Big and strong

Gorillas, buffalos, rhinoceros, elephants, giraffes, blue whales, golden eagles, ostriches, and giant clams – these are all living creatures of impressive size and strength. Children can compare their own weight with that of various heavyweight animals, test their strength, and even see how they measure up against a whale.

Favourite animals

Guided tour à la carte: The group names 4 favourite animals and we accompany the children to the animals. Together we explore where and how they live, what they eat and how they move around. Colourful picture cards and careful observation help us find the answers.

Forest animals

Children learn about animals that are native to Austrian forests. Traces of food, excrement, fruits and seeds, leaves and buds gives children the chance to touch and understand this woodland habitat.

Starfish and sunfish – sea animals

Together we go in search of animals that are native to the world's seas. Where do they live? What do they eat? Do they have scales, feathers, or fur? Clam and snail shells, starfish, and cuttlefish bones are waiting to be discovered.

Frog King und Rainbow Fish – fairytale animals

On a walk through the museum the children meet many animals familiar to them from fairytales. They learn all about how these animals live and whether they really do have the same characteristics as described in the fairytales. Is the wolf really so bad? And are all frogs really the sons of kings?

Our Earth

Fire – water – earth – air – life. This guided tour provides children with lots of exciting knowledge on our planet from our newly renovated Hall 6.

Dinosaurs and their contemporaries

In the geological and paleontological galleries children can marvel at lifesize models of dinosaurs, many of which they will already be familiar with from books and films. Further highlights include touching a real dinosaur bone and learning about other animals and plants that were alive when the dinosaurs roamed the Earth.

Monkeying around

How much monkey do we have in us? The school children learn how our closest relatives – gorillas, orangutans and chimpanzees – live. In the anthropological exhibition they get the chance to see what early humans looked like, how they moved, and which tools they used.

Stone Age

Our journey begins in the time of the Paleolithic hunters and gatherers, where the school children can see what the find site of the Venus of Willendorf would have looked 30,000 years ago. The tour then continues into the Neolithic and passes through Austria's first farming village before ending in the Copper Age, when Ötzi the Iceman was alive. Animations and colorful illustrations show how people would have lived at the time.

Opening Hours of the NHM Vienna

Thursday through Monday 9 a.m. - 6 p.m., Wednesday until 8 p.m., closed Tuesdays
Exceptions found at <https://www.nhm-wien.ac.at/en/information>

Duration

50 minutes
